Compliance Score

### Next Steps:

- 1. Review your Violations:** You will see a description of each violation along with recommended best practices your team can implement immediately to improve your compliance score.
- 2. Get your Free Premium Test, which includes:**
  - a. 78 additional tests performed on your submitted URL
  - b. Comprehensive downloadable report with test results and best practices
  - c. Unlocks the ability to run the free premium test on additional URLs

## Violations

### Provide a valid label for form fields

Severity: 10

10

When on-screen labels are present, they must be programmatically associated with form fields. When on-screen labels are not present, form fields must be given an accessible label.

When form fields do not have a programmatic (accessible) label, assistive technologies may incorrectly render the label or provide no label at all to users. When labels are not present or are incorrect, users of assistive technologies may not be able to complete a form.

The HTML5 specification has a new form field attribute called **placeholder**. This represents a label or hint, such as a word or short phrase, that is assigned to a form field such as an input field. The label or hint appears within the form field and goes away when users start typing. When the **placeholder** attribute is used, the label or hint may not be detected by assistive technologies. Therefore, developers should provide off-screen text in the **label** element of the form field or provide a **title**

#### Violations Identified (1)

```
<input name="searchword" value="" type="text">
```

### Provide alternative text for images

Severity: 10

10

All images within a page must be given an alternate text equivalent. Text equivalents for non-text elements communicate the meaning of images to users who cannot perceive the image such as users of screen readers. Proper equivalents provide text which contributes the same level of understanding to the content of the page as the image itself. In instances where the image does not contribute to the understanding of the content and is purely decorative, it needs to be marked in a way to indicate its purely decorative purpose.

```

```

### Ensure data table headers are properly identified

Severity: 10

10

Data tables must identify the header cells that label the data cells in the same column or row. Indicating that a cell is a header cell via the **th** element allows screen readers and other assistive technologies to identify data tables from layout tables and tables and provides a mechanism for users to navigate within data tables.

```
<table class="mvc_peopleTable" style="width: 90%;" cellpadding="0" cellspacing="0" align="center">
  <tbody>
    <tr title="03-30-2021" align="left">
      <td></td>
      <td>Dzisiaj</td>
      <td align="right">187</td>
    </tr>
    <tr title="03-29-2021" align="left">
      <td></td>
      <td>Wczoraj</td>
      <td align="right">317</td>
    </tr>
    <tr title="03-29-2021 - 04-04-2021" align="left">
      <td></td>
      <td>Bieżący tydzień</td>
      <td align="right">497</td>
    </tr>
    <tr title="03-01-2021 - 03-31-2021" align="left">
      <td></td>
      <td>Bieżący miesiąc</td>
      <td align="right">7072</td>
    </tr>
    <tr title="" align="left">
      <td></td>
      <td>Wszystkich</td>
      <td align="right">112245</td>
    </tr>
  </tbody>
</table>
```

### Ensure link text is meaningful within context

Severity: 6

6

It is important for users to be able to discern the purpose of all links. Meaningful link text should not be overly general and should clearly describe the content to be found or action to be performed by the link. For example, do not use generic text such as "click here", "read more", etc. unless the purpose of the link can be determined by meaning in the surrounding content. When a link's purpose can not be determined users may be required to follow the link to determine its purpose. Returning to a previous location can often be more difficult for users with disabilities using assistive technology. Thus, developers must ensure that a link's purpose is clear.
